Why Choose Us?

Since 2009

- ◆ The sole supplier who has design team providing professional support for projects.
- ◆ 24H7D service.
- ◆ 100% real test report.
- ◆ Products have been sold to more than 57 countries.
- ◆ More than 8 patented products in the recent 3 years.
- ◆ 100% safe transaction assurance.
- ◆ Small orders are acceptable.
- ◆ Delivery time agreement is available.
- ◆ Golden plus supplier and key account supplier of Alibaba.

ABOUT MEXYTECH

Lead the eco trend

Production Workshop

Container Shipment

Foshan MexyTech Co.,Ltd is a manufacturer founded in 2009,which is professional in producing eco materials. With excellent R&D capacity, MexyTech contributes to environmental protection and devotes to develop WPC as a perfect substitution of natural wood. Moreover, in 2016, we developed fire-resistant WPC formula and practical design for MecoFence. And MexyTech has built long-term relationships with our clients in Europe, the Middle East, Australia, Southeast Asia, America and other areas in the world. After a decade's development, MexyTech has gained rich experiences from many of our projects like HongKong Ocean Park, Macau Tower and Malaysia Genting, which showing that we are capable of undertaking big projects with very strict and exact standards.

DEVELOPMENT OF ENTERPRISE

2009

Incorporation of MexyTech

2011

Cooperation with South China University of Technology for R&D and production control

2013

Capacity expansion to 20 production lines in order to ensure delivery

2014

Cooperation with New Zealand design company for WPC fence

2015

One of the top 5 WPC suppliers for co-extrusion products

2016

Development of fire-resistant formula for composite wood for special applications. Apply and obtain patents for WPC, such as WPC fence, new decking clips, decking pedestal systems, etc.

2021

Compare to year of 2020, sales performance has tripled.

Suprotect Series

Suprotect decking is a new generation of wood plastic composite with high-tech co-extrusion technology. Different from traditional WPC , co-extrusion technology is a process in which a protective layer of polymer and an inner WPC layer are co-extruded at the same time with high temperature. We also call it co-extrusion or capped decking.

The inner layer is made of high-density recycled plastic and wood fiber. The patented polymer plastic is used in the outer coating to enhance the resistance. Plus 3D wood grain and professional color matching, both of the quality and appearance are better than the composite decking.

Fire Resistance Decking

In order to meet the market demand,MexyTech developed Suprotect Fire Resistant Decking.

It is new for the whole WPC market.It is not simply about adding additives, we must make sure basic performances are not affected at the same time.In 2016 we made a significant breakthrough on the research.After testing ,our new fire-resistant products can pass the **ASTM E84 level A** and the **EN13501 Bf1-s1** fire resistance.(The test report is on the Page 6)

Test Report

Number: 024602700053

Test Description

1. Fire Classification Test on Samples Fire Resistant Composite Wood

As per the client's request, the tested samples were subjected to the following tests:

Sample description: Hollow WPC Railing

Sample thickness: 25.0 mm

Initial inspection: No any damage was found

Executive summary

No.	Test item	Test method	Standard's requirement	Test result	Conclusion	
1	Critical heat flux	EN ISO 8236-1:2015	≥8.3 kW/m²	8.2 kW/m²	Pass	
2	Flammability	Surface flame spread Smoke Flame height Flame front Flame heat flux (EN ISO 11825-2:2012)	EN ISO 11825-2:2012	≤150mm	130mm	Pass
3	Smoke production	EN ISO 14685:2012	EN ISO 14685:2012	≤200g/m²	180g/m²	Class s1
Conclusion: EN 13501-1:2007 (A1) Bf1-s1						
Remark: The test results relate to the behavior of the test specimens of a product under the particular conditions of the test; they are not intended to be the sole interest for assessing the potential hazard of the product in use.

Test Report

Report Number: 16081000094F-0P-1

V. TEST RESULTS

The test results, compared on the basis of observed flame front advance and electronic smoke density measurements are presented in the following table:

Test Specimen	Flame Spread Index	Smoke Developed Index
"EXTRUDED COMPOSITE WOOD" ROOF OF DECORING AND WALL CLADDING"	10	5

The data sheets are included in attached page. These sheets are actual print-outs of the computerized data system which monitors the barrel burner, and controls and calculation and specimen data needed to calculate the test results.

VI. OBSERVATIONS

During the test, the specimens were observed to behave in the following manner:

Time (minutes)	Observations
0:00	The test burners were turned on.
3:04	Transient ignition was observed.
4:05	Steadily ignition was observed.
10:00	The test burners were shut off.
	After the burners were turned off, a fire occurred after flame was observed.

After the test, the specimens were observed to be damaged as follows:

Distance (FEET)	Damage Description
0-7	The specimen was charred and sagging.
7-24	The specimen was discolored and sagging.

SGS

Test Report

No. A/F19C7568B0FF

Date: JUL. 30, 2018

Page 1 of 4

Notes:

- 1) Where all specimens do not ignite, melt and stand apart for smoke release shall be reported separately for those specimens that ignite and those that do not ignite. The higher of the two values shall be reported as the lowest statement for the material or component.
- 2) Where all specimens do not ignite, indices for smoke developed shall be reported separately for those specimens that ignite and those specimens that do not ignite. The higher of the two values shall be reported as the smoke developed index for the product.

Flammability Indices:

Item	Flammability Indices
Ignitability index (Range 0 to 30)	0
Spread of flame index (Range 0 to 10)	0
Heat involved index (Range 0 to 10)	0
Smoke developed index (Range 0 to 10)	0

Statement:

- 1) The results only apply to the specimen-mounted as described in the report.
- 2) This declaration of conformity is only based on the result of this laboratory activity, irrespective of the uncertainty of the results was not included.
- 3) The results of this test may be used to directly assess fire hazard, but it should be recognized that a single test method will not provide a full assessment of fire hazard under all conditions.

To be continued...

3D Embossing Decking

New Production Technique

Compared to the traditional WPC products,3D embossing product will have a more natural visual appearance and more realistic wood grain texture. 3D embossing decking doesn't need the extra treatment,it can finish the embossing during the extrusion.

Long-termed Durability

The 3D embossing wood grain is much deeper than normal embossing and it can keep long-lasting texture against abrasion during the applications

Decking Tile Pro

Excellent structure:
By using Aluminum as the frame, it does not rust, and has good durability and structural strength. We choose black color for the aluminum frame, which is better hiding.

Elegant Design:
600*600mm module, this design is more suitable for the quick installation of small gardens or small projects, and it looks elegant.

Good flexibility:
It can be equipped with the pedestal for installation. It has good flexibility for the ground that needs to be raised.

Composite Decking Series

Composite decking is a new flooring material, a combination of wood fiber, HDPE and different additives. It can not only give the feeling and appearance of wood, but also can solve many problems of wood, like rotting, mildew, cracking, etc. With rapid development of WPC industry, WPC decking has gradually taken the place of wood flooring, and become the mainstream of outdoor decking.

Composite Decking

Advantage

100% recyclable and eco-friendly, saving forest

Water resistance and mildew proofing

Excellent UV resistance

Formaldehyde emission: E0(the highest standard)

Weather resistant from -30°C to 70°C

Termite resistance

DIY and easy installation

No paint or glue needed

Side clip

Patented Clip - Easy installation and more stable decking system

Installation Steps

1. Install aluminium joist system

Model	Span A(mm)	Span B(mm)
SB03	350	700
ML02	400	
OR02	450	

①Refer to the spacing table to lay two layers of joist.
* Fix the upper joists to the lower ones by using screws.

2.①Fix the side clips onto the joists first.
②Push the deck board tight to the side clips. Suggested length for actual application is not longer than 2.75 meters per piece.

3.①Put the special clip with a side hole into the middle of the decking side groove.
②Make sure the toothed side into the decking groove
③Screw through the side hole and fix the clip to decking board.

4. ①Put the normal clips for the rest. Make sure the toothed side to the groove.
②Slide another board to the clips to the right position.
③Fix the decking through the top holes of the clips.

5.①Repeat the steps above for the decking installation.
②Make sure the gap between cross sections of decking boards no less than 3mm.
③Make sure 10mm gaps to the walls for the expansion or contract.

6.①Predrill a hole like the pic shown below and then screw the decking board to the joist.
②Fix the fascias. Job finished.

MexyBase Adjustable Pedestal System

MexyBase Adjustable Pedestal System is an innovative design, mainly used to solve the problems of installing decking on uneven ground, and raising the whole decking system. It's widely used in swimming pools, gardens, rooftop, etc.

MexyBase system has been receiving constant praise since its launch in 2016.

Advantage:

- Hiding the water tube, gauge, cable, etc.
- Meeting the demand of load bearing.
- Raising for water draining to protect decking.
- DIY assemble
- Various adjustable heights
- Fast installation to save time and labor
- Free maintenance
- Patented design

Easy Installation

Smart Design

Adjustable Pedestal

Patented design

DIY Aluminum Joist System

1. Adjust the the height of the pedestal for actual application, then place them at site according to the reasonable span.

2. Snap the aluminum joists into the pedestal tabs. This smart design can save a lot of time without using screws to lock the joist tight.

3. Insert the joist connector into the two ends of joists. Slide the joist through the gap to the right position. Rotate 90 degree to build the frame structure tight.

4. The last step is to fix the deck boards onto the joists frame structure according to the installation guide. Because of no screws application and the rotation method to build the frame, less labor cost and time is required by using our design.

The Enhanced Aluminum Joist System

- Stable double structure prevents it from changing and moving.
- The aluminum structure is fixed by screws.
- Antioxidant , no rusty or corrosive.

Choosing MecoFence,
your garden must be the unique one among all your neighborhoods

MECOFENCE

With aluminum frame and WPC boards, MecoFence design is coming with patent, which has superior application performance and attractive wood appearance.

Product Features

Durable for Outdoor Application-Stable and anti-UV in any temperatures.

Easy Installation-Just few screws for the fence installation. The smart design makes the fence DIY become possible.

Eco-friendly - MecoFence is made of recyclable materials. It doesn't contain harmful elements or heavy metals.

Confident Warranty- MecoFence offers 10 years warranty

Patented Designs - Unique fencing system and pass wind resistance test.

Patents and test reports

Wind Resistance Test

The image shows the top-left corner of an Intertek Test Report. The header includes the Intertek logo, 'Test Report' text, and fields for 'Test Date' (2018/03/09) and 'Intertek Report No.' (180206062GZU-003). Below this is a table with columns for 'No.', 'Test Item', 'Test Parameter', 'Test Result', and 'Verdict'. The first row is partially visible, showing '1' in the 'No.' column and 'Wind resistance test' in the 'Test Item' column. A magnifying glass is positioned over the 'Test Result' and 'Verdict' columns of this row, highlighting the text 'There was no failure, nor any evidence of disengagement of any component, nor visible cracks in any component' and 'Pass' respectively.

Issue Date: 2018/3/9 Intertek Report No. 180206062GZU-003

Test Items, Method and Results:

No.	Test Item	Test Parameter	Test Result	Verdict
1	Wind resistance test	Test method: Client's requirements Requirements: The fencing system shall resist a maximum horizontal quarter point load of 372,1 N/m ² x effective area of system (as 9 Beaufort scale or 9 wind level)	There was no failure, nor any evidence of disengagement of any component, nor visible cracks in any component	Pass

Choosing MecoFence,
your garden must be the unique one among all your neighborhoods

MECOFENCE

With aluminum frame and WPC boards, MecoFence design is coming with patent, which has superior application performance and attractive wood appearance.

Product Features

Durable for Outdoor Application-Stable and anti-UV in any temperatures.

Easy Installation-Just few screws for the fence installation. The smart design makes the fence DIY become possible.

Eco-friendly - MecoFence is made of recyclable materials. It doesn't contain harmful elements or heavy metals.

Confident Warranty- MecoFence offers 10 years warranty

Patented Designs - Unique fencing system and pass wind resistance test.

Patents and test reports

Wind Resistance Test

The image shows the cover of an Intertek Test Report. At the top, the Intertek logo is visible, followed by the text 'Intertek Test Report'. Below this, there is a section for 'Test Item' and 'Test Result'. A magnifying glass is positioned over a specific section of the report, highlighting the 'Test Item' and 'Test Result' columns. The magnified area shows a table with two columns: 'Test Item' and 'Test Result'. The first row of the table has the following data:

Test Item	Test Result
1. Wind resistance test	Pass

Issue Date: 2018/3/9 Intertek Report No. 180206062GZU-003

Test Items, Method and Results:

No.	Test Item	Test Parameter	Test Result	Verdict
1	Wind resistance test	Test method: Client's requirements Requirements: The fencing system shall resist a maximum horizontal quarter point load of 372,1 N/m ² x effective area of system (as 9 Beaufort scale or 9 wind level)	There was no failure, nor any evidence of disengagement of any component, nor visible cracks in any component	Pass

Eco-wood Ceiling

MexyTech eco-wood ceiling series serves as a perfect substitution of real wood ceiling and aluminium ceiling. The simple installation, good thermal insulation and fire resistance make it outstanding among other traditional ceilings. Nowadays, MexyTech eco ceiling series becomes more and more popular in the world because of its excellent features.
