## Style: Chinese lattice

### Tools

Pencil

Electric Drill

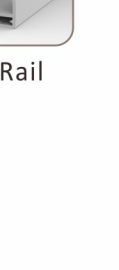

Impact Drill

Hammer

Level Ruler

Electric Saw

### Hardware

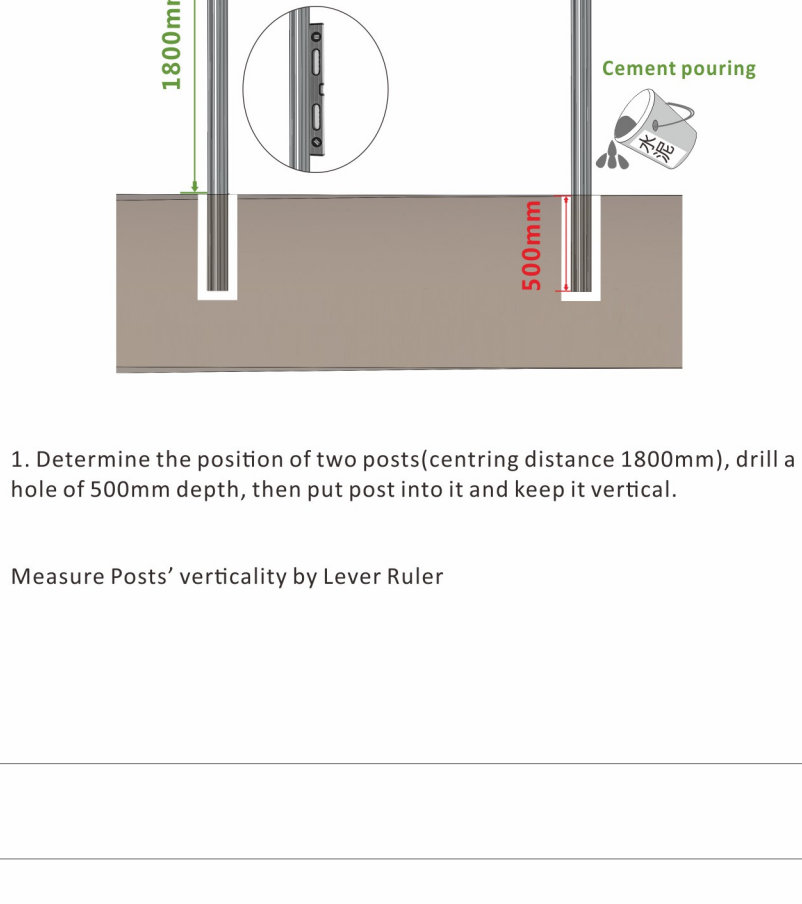

Expansion Screws

Round Head Drilling Screws

### Fence Accessories

Fence Panels Chinese lattice

Post

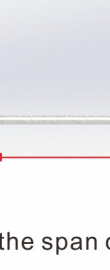

Side Cover

U Rail

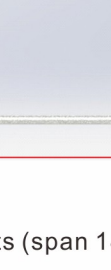

Cap

Corner Brace

Post Base

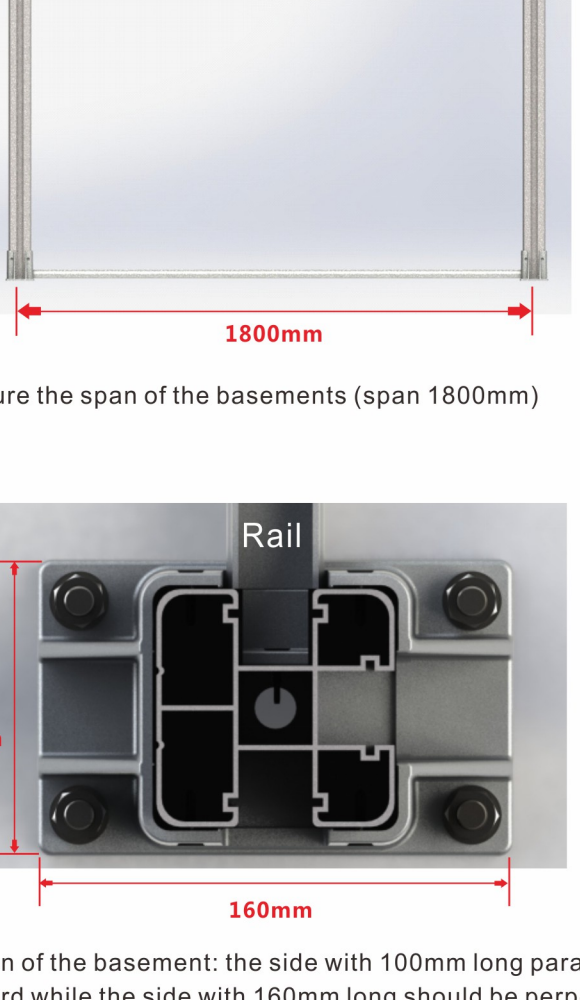

H Rail

### Installation

#### STEP 1 Install the post

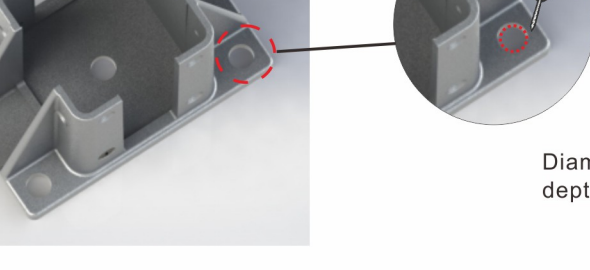

##### A. Fixing Post by burying it

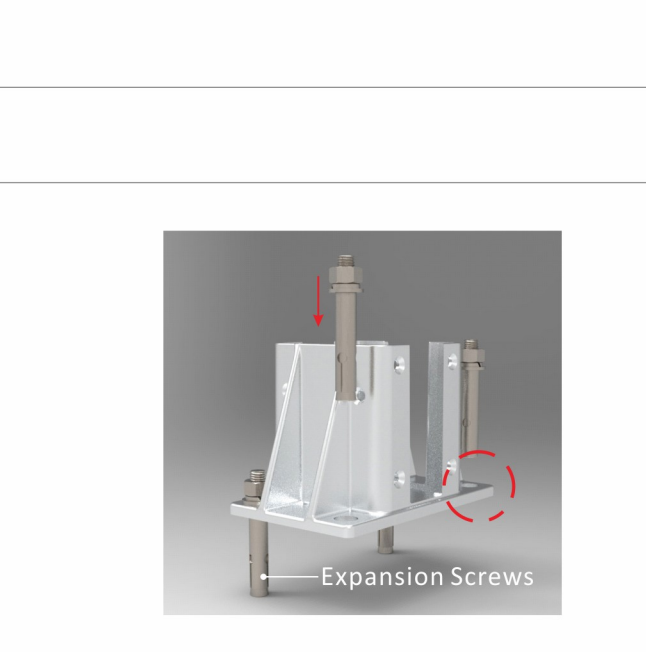

1. Determine the position of two posts (centring distance 1800mm), drill a hole of 500mm depth, then put post into it and keep it vertical.

Measure Posts' verticality by Lever Ruler

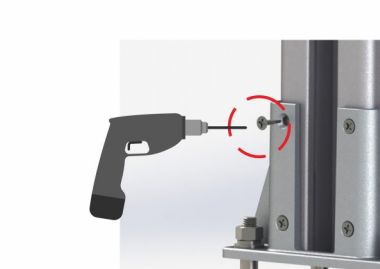

##### B. Use the basement for the nonembedded installation

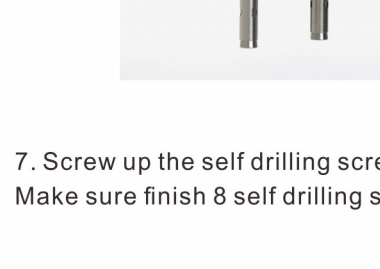

1. Make sure the span of the basements (span 1800mm)

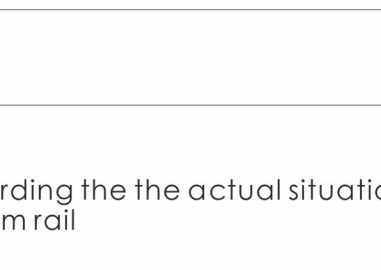

2. Direction of the basement: the side with 100mm long parallel with the fence board while the side with 160mm long should be perpendicular to the fence board.

3. Mark the position when make sure the position of basement.

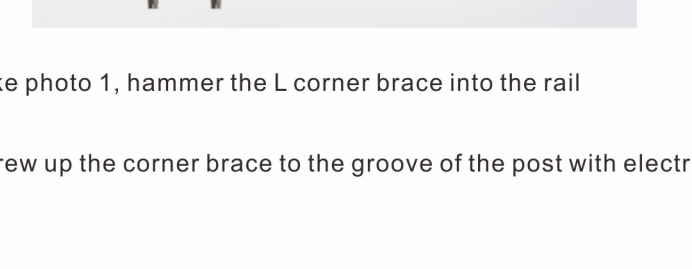

4. Take away the basement and prebore four holes with impact drill.

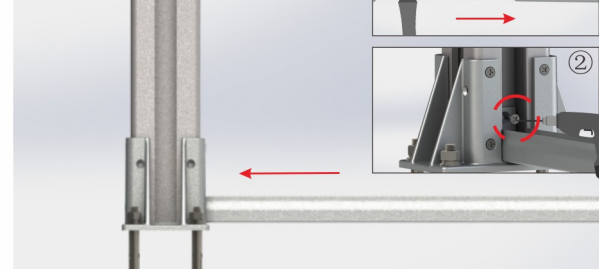

5. Make sure the anchor screws through the holes of basement and then hammer them into the prebored holes. Then tighten the screws with a spanner.

6. Put the post into the basement and keep it vertical.

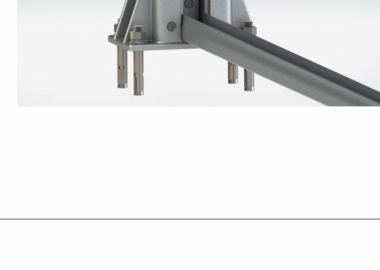

7. Screw up the self drilling screws through the post with electric drill. Make sure finish 8 self drilling screws.

#### STEP 2 According the the actual situation, install the bottom rail

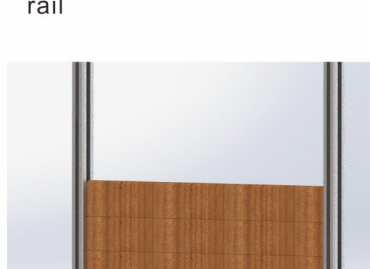

1. Like photo 1, hammer the L corner brace into the rail

2. Screw up the corner brace to the groove of the post with electric drill

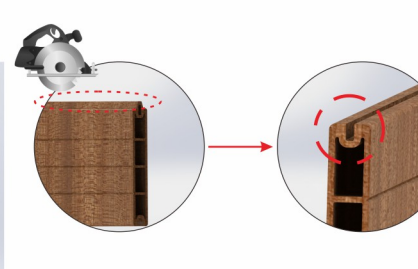

3. Finish the other side according the step above

#### STEP 3 Install the fence board

1. Slide the CF01 fence board through groves of the post to the bottom rail

2. Cut the seventh CF01 fence board according to the photo.

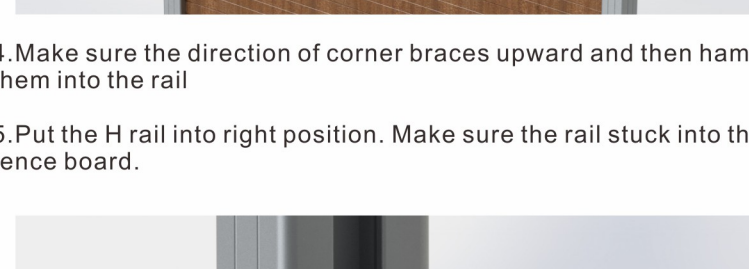

3. Fix the seventh CF01 fence board.

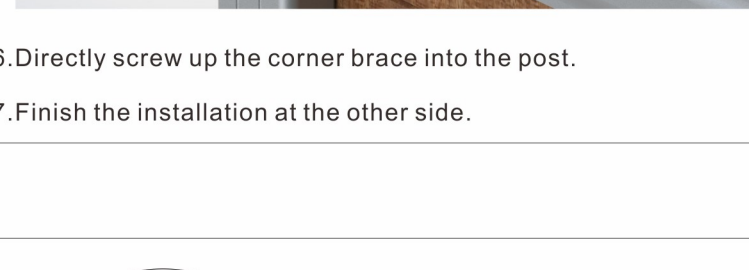

4. Make sure the direction of corner braces upward and then hammer them into the rail

5. Put the H rail into right position. Make sure the rail stuck into the fence board.

6. Directly screw up the corner brace into the post.

7. Finish the installation at the other side.

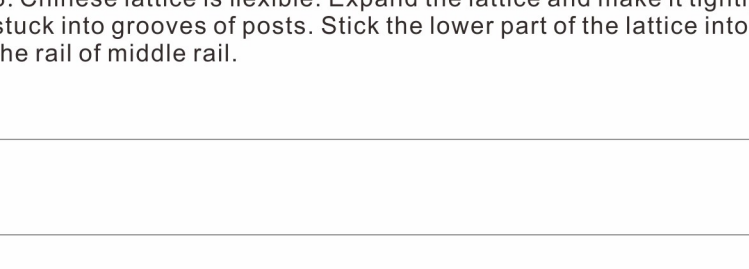

8. Chinese lattice is flexible. Expand the lattice and make it tightly stuck into grooves of posts. Stick the lower part of the lattice into the rail of middle rail.

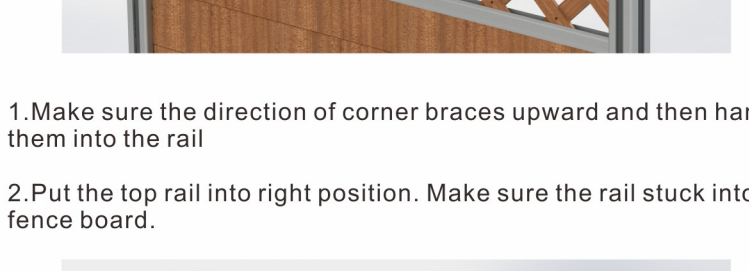

9. Make sure the direction of corner braces upward and then hammer them into the rail

10. Put the top rail into right position. Make sure the rail stuck into the fence board.

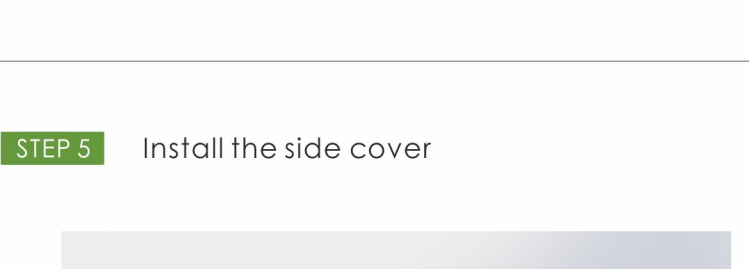

11. Directly screw up the corner brace into the post.

12. Finish the installation at the other side.

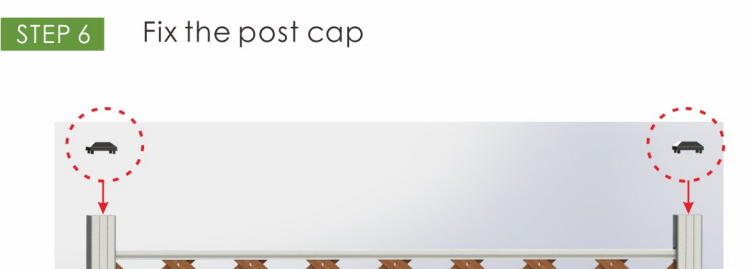

13. Make sure the direction of corner braces upward and then hammer them into the rail

14. Put the top rail into right position. Make sure the rail stuck into the fence board.

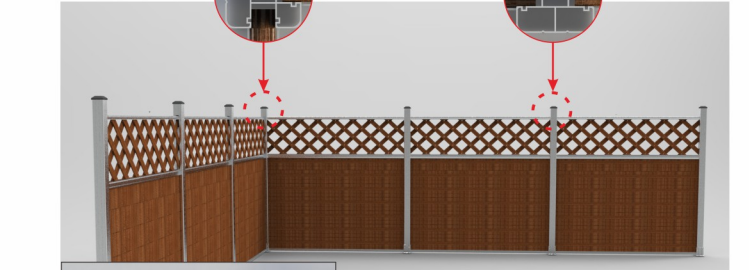

15. Directly screw up the corner brace into the post.

16. Finish the installation at the other side.

17. Make sure the direction of corner braces upward and then hammer them into the rail

18. Put the top rail into right position. Make sure the rail stuck into the fence board.

19. Directly screw up the corner brace into the post.

20. Finish the installation at the other side.

21. Make sure the direction of corner braces upward and then hammer them into the rail

22. Put the top rail into right position. Make sure the rail stuck into the fence board.

23. Directly screw up the corner brace into the post.

24. Finish the installation at the other side.

25. Make sure the direction of corner braces upward and then hammer them into the rail

26. Put the top rail into right position. Make sure the rail stuck into the fence board.

27. Directly screw up the corner brace into the post.

28. Finish the installation at the other side.

29. Make sure the direction of corner braces upward and then hammer them into the rail

30. Put the top rail into right position. Make sure the rail stuck into the fence board.

31. Directly screw up the corner brace into the post.

32. Finish the installation at the other side.

33. Make sure the direction of corner braces upward and then hammer them into the rail

34. Put the top rail into right position. Make sure the rail stuck into the fence board.

35. Directly screw up the corner brace into the post.

36. Finish the installation at the other side.

37. Make sure the direction of corner braces upward and then hammer them into the rail

38. Put the top rail into right position. Make sure the rail stuck into the fence board.

39. Directly screw up the corner brace into the post.

40. Finish the installation at the other side.

41. Make sure the direction of corner braces upward and then hammer them into the rail

42. Put the top rail into right position. Make sure the rail stuck into the fence board.

43. Directly screw up the corner brace into the post.

44. Finish the installation at the other side.

45. Make sure the direction of corner braces upward and then hammer them into the rail

46. Put the top rail into right position. Make sure the rail stuck into the fence board.

47. Directly screw up the corner brace into the post.

48. Finish the installation at the other side.

49. Make sure the direction of corner braces upward and then hammer them into the rail

50. Put the top rail into right position. Make sure the rail stuck into the fence board.

51. Directly screw up the corner brace into the post.

52. Finish the installation at the other side.

53. Make sure the direction of corner braces upward and then hammer them into the rail

54. Put the top rail into right position. Make sure the rail stuck into the fence board.

55. Directly screw up the corner brace into the post.

56. Finish the installation at the other side.

57. Make sure the direction of corner braces upward and then hammer them into the rail

58. Put the top rail into right position. Make sure the rail stuck into the fence board.

59. Directly screw up the corner brace into the post.

60. Finish the installation at the other side.

61. Make sure the direction of corner braces upward and then hammer them into the rail

62. Put the top rail into right position. Make sure the rail stuck into the fence board.

63. Directly screw up the corner brace into the post.

64. Finish the installation at the other side.

65. Make sure the direction of corner braces upward and then hammer them into the rail

66. Put the top rail into right position. Make sure the rail stuck into the fence board.

67. Directly screw up the corner brace into the post.

68. Finish the installation at the other side.

69. Make sure the direction of corner braces upward and then hammer them into the rail

70. Put the top rail into right position. Make sure the rail stuck into the fence board.

71. Directly screw up the corner brace into the post.

72. Finish the installation at the other side.

73. Make sure the direction of corner braces upward and then hammer them into the rail

74. Put the top rail into right position. Make sure the rail stuck into the fence board.

75. Directly screw up the corner brace into the post.

76. Finish the installation at the other side.

77. Make sure the direction of corner braces upward and then hammer them into the rail

78. Put the top rail into right position. Make sure the rail stuck into the fence board.

79. Directly screw up the corner brace into the post.

80. Finish the installation at the other side.

81. Make sure the direction of corner braces upward and then hammer them into the rail

82. Put the top rail into right position. Make sure the rail stuck into the fence board.

83. Directly screw up the corner brace into the post.

84. Finish the installation at the other side.

85. Make sure the direction of corner braces upward and then hammer them into the rail

86. Put the top rail into right position. Make sure the rail stuck into the fence board.

87. Directly screw up the corner brace into the post.

88. Finish the installation at the other side.

89. Make sure the direction of corner braces upward and then hammer them into the rail

90. Put the top rail into right position. Make sure the rail stuck into the fence board.

91. Directly screw up the corner brace into the post.

92. Finish the installation at the other side.

93. Make sure the direction of corner braces upward and then hammer them into the rail

94. Put the top rail into right position. Make sure the rail stuck into the fence board.

95. Directly screw up the corner brace into the post.

96. Finish the installation at the other side.

97. Make sure the direction of corner braces upward and then hammer them into the rail

98. Put the top rail into right position. Make sure the rail stuck into the fence board.

99. Directly screw up the corner brace into the post.

100. Finish the installation at the other side.

101. Make sure the direction of corner braces upward and then hammer them into the rail

102. Put the top rail into right position. Make sure the rail stuck into the fence board.

103. Directly screw up the corner brace into the post.

104. Finish the installation at the other side.

105. Make sure the direction of corner braces upward and then hammer them into the rail

106. Put the top rail into right position. Make sure the rail stuck into the fence board.
